PPG Performance Glazings

November 5, 2010

Dear Valued Customer,

PPG is pleased to announce the introduction of Graylite® II glass, a major advancement to the existing *Graylite* glass substrate. The change in substrate composition will bring significant benefits in the solar control performance of the glass as shown in the table below while maintaining the same basic aesthetic. The change over will be immediate and existing price points will be carried over from your current *Graylite* glass levels.

A limited amount of inventory for the original *Graylite* glass has been retained to complete existing projects where specific needs exist. PPG recommends the use of a mock-up to ensure acceptable appearance match to glass previously installed in projects that are in process.

Glass (6mm monolithic glass)	Visible transmittance	UV transmittance	SHGC
Graylite®	14%	7%	0.47
Graylite® II	9%	2%	0.35

Please contact your PPG representative with any questions regarding this transition.

Sincerely,

Glenn T. Miner
