SUBJECT: Communication of Low-e Coated Glass Transition Timing

Dear Valued Customer,

On February 1, 2013 our company launched two new product families of low-emissivity coated glass – **ENERGY Select** for the architectural and commercial segments and **COMFORT Select** for residential segments. Our announcement can be found on our website us.agc.com.

Today we are communicating how our existing low-e coated glass products – Comfort Ti and Comfort EPS will be affected during this transition and phase out period.

Beginning March 1, 2013 we will begin the official transition process from our existing low-e coated glass products to our two new product families. **ENERGY Select** and **COMFORT Select** are suitable replacements for our Comfort Ti and Comfort EPS line of products. By June 1, 2013 we will cease offering our existing low-e coated glass products.

The below table is provided for your reference. Any additional questions you may have can be directed to your AGC Sales or Technical Services Representative, emailing us at info@us.agc.com or calling (888) 234-8380.
