Frameless Shower Enclosures

Frameless style shower doors and enclosures have gained popularity because of their ability to create an elegant and open appearance while still performing their original intention. The frameless style is highlighted by a more open look due to its minimal use of metal to hold the glass door and panels in place. The term frameless is applied to those enclosures where the metal framework has been reduced by varying degrees. Some frameless units use the same thickness of glass (5/32", 3/16" or 1/4") as framed enclosures and often have metal framework across the top and along the bottom of the enclosure.

THERE ARE MANY GLASS CHOICES IN STOCK THAT ALLOWS QUICK COMPLETION OF YOUR PROJECT. FROM CLEAR TO CLARISTA™ (WATER SPOT RESISTANT) TO MANY DIFFERENT OBSCURE TEXTURES.

Heavy glass frameless enclosures, using 3/8" or thicker, have limited the metal parts to small hinges and channels to support the heavy glass. The remaining support is provided by the thickness of the glass. The size of the glass panels required by the design of the enclosure is the determining factor regarding thickness of glass. This in turn equates into the amount of hardware and channels required for a structurally sound enclosure that will deliver years of maintenance free service. There are also

alternatives to supporting the stationary glass panels of an enclosure. One of which the glass is embedded between the tile, marble, corion or whatever material has been selected. The coordination of this process requires involvement before the shower material selection has begun to be installed. There are several choices of glass, hardware and applications to assist in enhancing your shower or bath area. There are enclosures that can be designed at a cost to fit all budgets. While these enclosures are open and elegant there are stipulations that you should be aware of that are described in our warranty for frameless enclosures.

Warranty Information

The warranty is as follows: Special consideration will be observed when providing said warranty to all frameless shower enclosures. Frameless shower enclosures provide a very clean and attractive appearance to the finished product. To achieve this desired appearance manufactures must make some structural compromises to given product. Because of the nature of the frameless product, there are certain unavoidable limitations. To include, but not limited to the following:

- Water leakage due to the structural design at pivot points and sweep areas.
- Gasket and adhesive seals are limited to the workmanship upon installation. Any failures of the actual material beyond installation cannot be warranted, due to the lack of control of the adhesive manufacturing process.
- Any other type of water leakage caused by customer requested cosmetic changes.
- It is advisable to locate shower heads to where they do not directly spray door area. This will decrease water leak potential.
- Tempered glass products used for heavy glass shower doors have a high probability of slight imperfections, distortion and warpage. These are all acceptable within industry standards.

Please take time to read carefully and ask your Customer Service Representative for an explanation of any concerns you may have regarding the products or warranty.

Quality Glass & Mirror's dedication to excellance involves providing the customer with a clear understanding of the product they are purchasing and what they can expect from the long-term performance.
